

Security as a Foundation for Innovation

Competitive, modern businesses aren't afraid of change. They are evolving customer communication channels, leveraging AI and Machine Learning, and providing more transparent access to internal data and processes in real-time. However, none of that is possible without world-class security. Microsoft's implementation of Zero Trust standards can open the door to a world where security risks become indicators of opportunity.

Risk, Redefined as Opportunity

Shadow IT— Employees that bring “unapproved” applications into the workplace (eg: cloud storage, chat, Meeting or CRM tools) are telling you something about the tools you've provided. Either they aren't the right tools, or maybe there's something they need that you haven't delivered at all. Use this as an opportunity to adopt solutions that fill the need and make your people more productive!

Data Exports — Users export data so that they can get answers from it that the data source isn't providing. If this is happening in your organization, this would be a great time to lean into a corporate-wide deployment of a data analytics platform such as Power BI. Analytics tools provide your people with better intelligence, and reduces data leakage risk!

Custom Software— Often seen as a “last resort”, and frequently identified as a security risk, custom written software can be a real headache. However, modern low-code/no-code solutions allow you to build custom workflows on platforms that take the security and lifecycle management out of the equation. All the benefits, without the risk!

Let Envision Help You to Modernize

We deliver solutions that are Modern, Secure, Innovative and designed to help your organization compete in a rapidly changing marketplace.

Envision has **experts** that can help you with:

Microsoft Consulting & Zero Trust—leveraging the most powerful and comprehensive suite of tools in the world, let us help you get the most security and productivity out of the 365 platform

Cybersecurity—with human-centric penetration testing and the latest security tools, our *Red Team* will attack in the same way a threat actor would, exposing risk that other companies overlook

Managed Services—support center, monitoring, and platform management – all provided without forcing you into a termed contract or making you pay set-up fees

Data Analytics & Automation—Our Power Platform specialists deliver new insights from existing data, and help your business scale without increasing overhead

Infrastructure & Cloud Consulting—From modern wireless backbones, to micro segmentation, and hybrid or cloud-native datacenters, our engineering talent has you covered

Web Design & Custom Development—Your digital presence is the centerpiece of your communication with the world. We ensure that it reflects your culture and goals, while remaining brand consistent across all channels

Digital Transformation—Convert legacy processes and forms into digitally optimized, custom workflows by engaging with our team of full-stack application and middleware developers
